

Diploma of Sustainability

Specialised skills and abilities are required to develop sustainable practices within organisations.

The Diploma of Sustainability develops an understanding of the key concepts of sustainability and their application to the workplace. The Diploma identifies the key global sustainability issues and progresses through a series of best practice solutions aimed at addressing those issues. Specifically, the Diploma of Sustainability develops knowledge and skill in the area of organisational behavioural change towards sustainable practices, the development of business plans for sustainability and the problems associated with current consumption and production practices.

Four Core Units

The Diploma of Sustainability consists of four specialist sustainability units and 10 electives. However, our Diploma of Sustainability is designed to be delivered online and primarily as a dual qualification. This means that if you hold a tertiary qualification at Diploma level or higher, credit is granted for the 10 electives, leaving just the four specialist units to complete. These are delivered **online** part-time over two semesters. Many Diploma candidates will also be interested in completing additional specialised units in Carbon Accounting (see over).

Online

National Code	Diploma of Sustainability Specialist Core Units	Prerequisites	Hours
VU20302	Apply the concepts of sustainability to own, or local practice	Nil	60
