

CRS1400029 Associate Degree in Electronic Engineering – Curriculum Map

The Associate Degree in Electronic Engineering provides graduates with the practical ability and theoretical understanding necessary to enter employment at a paraprofessional engineer level and/or to articulate into relevant undergraduate engineering degree courses. The qualification was developed to respond to the workforce development needs of the electronics and defence engineering industry in South Australia.

The program gives students a firm foundation in both theoretical study and practical skills. Students are encouraged to experiment and explore ideas through project-based learning activities, thus developing graduate employability attributes essential to Australia's technology-based industries.

Graduate Attributes

The graduate of this course will have developed the following knowledge and skills:

1. KNOWLEDGE AND SKILL BASE

- 1.1. Descriptive, formula-based understanding of the underpinning science and engineering fundamentals applicable to electronics.
- 1.2. Procedural-level understanding of the mathematics and computer science concepts which underpin electronics engineering.
- 1.3. In depth practical knowledge and skills in electronics.
- 1.4. Awareness of current research and emerging technologies in electronics.
- 1.5. Knowledge and understanding of contemporary workplace practices in electronics engineering.

2. ENGINEERING APPLICATION ABILITY

- 2.1. Application of problem-solving techniques to conceptualise a solution to an electronic engineering problem.
- 2.2. Application of design and analysis techniques to electronic subsystems comprising hardware and software.
- 2.3. Implementation of an electronic subsystem design through an operational prototype
- 2.4. Application of established technical and practical methods to assess the operational compliance of an electronic subsystem and modify it to obtain compliance.
- 2.5. Application of project management techniques to actively participate in the management of medium-sized projects.

3. PROFESSIONAL AND PERSONAL ATTRIBUTES

- 3.1. Participate effectively in team activities and be able to evaluate his/her contribution
- 3.2. Communicate effectively with the engineering team and the broader community
- 3.3. Demonstrate understanding of and commitment to professional and ethical responsibilities
- 3.4. Creative, innovative and pro-active demeanour.
- 3.5. Professional use and management of information.
- 3.6. Orderly management of self and professional conduct.

Note: The Graduate Attributes reflect and are mapped against the [Engineers Australia](#)'s Stage 1 Competency Standard for Engineering Associate.

The course structure consists of 15 core subjects and 2 elective choices taught over 4 semesters of study.

First Year			Credit Points
<i>First Semester</i>	Engineering Practice 1	ENGPRAC401	4.5
	Mathematics 1	ENGMATH401	4.5
	Digital Electronics	ENGDEL501	4.5
	Basic Electrical Circuits	ENGCIIRC501	4.5
<i>Second Semester</i>	Engineering Science	ENGSCI601	4.5
	Electronic Circuits	ENGCIIRC601	4.5
	Computer Science 1	ENGCOMP501	4.5
	Mathematics 2	ENGMATH501	4.5
Second Year			
<i>First Semester</i>	Computer Science 2	ENGCOMP601	4.5
	Microcontroller Programming	ENGMPR601	4.5
	Advanced Analog Electronics	ENGAEL602	4.5
	Elective Choice (see below)		4.5
<i>Second Semester</i>	Communications Systems	ENGCOMS601	4.5
	Project Management	ENGPMGT601	4.5
	Engineering Project	ENGPROJ601	4.5
	Elective choice (see below)		4.5
	Exposure to Engineering Practice	ENGEXP601	0
<i>Electives</i>	Mathematics 3	ENGMATH601	
	Engineering Practice 2	ENGPRAC602	
	Computer Networks	ENGCOMP602	
	Programmable Controllers	ENGPCON601	
	Mechatronics	ENGMECH602	
Total Credit Points			72

Learning Outcomes	<ol style="list-style-type: none"> 1. Demonstrate an understanding of one's responsibilities for health and safety, and adherence to safety practices 2. Identify and analyse hazards and risks related to WHS in the workplace 3. Safely use electronics assembly tools 4. Perform basic mechanical measurements, including marking-out and reading mechanical and electronics diagrams 5. Use fabrication techniques to construct, repair and facilitate the installation of electronic and computer systems components 6. Perform electronic printed circuit board assembly and disassembly using industry-standard soldering techniques 7. Identify and analyse sustainable work practices 8. Apply principles of effective team participation 	<ol style="list-style-type: none"> 1. Solve engineering problems involving arithmetic, simple algebra and trigonometry. 2. Use mathematical reasoning and a generalized problem-solving process. 3. Use appropriate technology to solve mathematical problems, and judge the reasonableness of the results. 4. Communicate mathematical reasoning and ideas using appropriate language and representations, such as symbols, equations, tables, and graphs. 	<ol style="list-style-type: none"> 1. Define electronics theoretical concepts as applied to digital electronic circuits and microcontrollers. 2. Explain the operation of digital electronic circuits comprising logic gates, combinational logic, flip-flops and related devices, counters and registers and MSI logic circuits. 3. Analyse the performance of digital electronic circuits and subsystems. 4. Use computer simulation for basic analysis of digital electronic circuits. 5. Prototype basic digital electronic circuits based on a given schematic diagram. 6. Correctly measure basic digital electronic circuit parameters using appropriate equipment. 7. Summarise and report the measured parameter values in commonly used engineering format. 8. Design of basic digital electronic circuits. 9. Design, write test and debug assembly language programs for microcontrollers. 	<ol style="list-style-type: none"> 1. Define fundamental electrical theoretical concepts as applied in basic electronic circuits and amplifiers 2. Explain the operation of a basic electronic circuit 3. Calculate the parameters of a basic electronic circuit and amplifier using circuit analysis techniques 4. Use computer simulation for basic analysis of electronic circuits 5. Prototype basic electronic circuits and amplifiers based on a given schematic diagram 6. Correctly measure basic electronic circuit and amplifier parameters using appropriate equipment 7. Summarise and report the measured parameter values in commonly used engineering format 	<ol style="list-style-type: none"> 1. Describe calculus techniques related to key concepts of basic physics. 2. Describe units and definitions commonly used in basic physics. 3. Solve scientific problems involving key concepts of basic physics. 4. Communicate mathematical and scientific reasoning and ideas using appropriate scientific language and representations 	<ol style="list-style-type: none"> 1. Define fundamental electrical theoretical concepts as applied in semiconductor electronic circuits 2. Explain the operation of a basic semiconductor electronic circuit 3. Calculate the parameters of a basic semiconductor electronic circuit using circuit analysis techniques 4. Use computer simulation for basic analysis of semiconductor electronic circuits 5. Prototype basic semiconductor electronic circuits based on a given schematic diagram 6. Correctly measure basic semiconductor electronic circuit parameters using appropriate equipment 7. Summarise and report the measured parameter values in commonly used engineering format 8. Design of basic semiconductor electronic circuits 	<ol style="list-style-type: none"> 1. Define basic computer science theoretical concepts 2. Design, write, test and debug simple programs written in high-level programming languages 3. Read and interpret code 4. Use the language and terminology of object-oriented programming 5. Summarise and report the algorithm and the coding solution 	<ol style="list-style-type: none"> 1. Solve engineering problems involving key concepts of linear algebra and differential and integral calculus. 2. Use mathematical reasoning and a generalized problem solving process. 3. Use appropriate technology to solve mathematical problems, and judge the reasonableness of the results. 4. Communicate mathematical reasoning and ideas using appropriate language and representations, such as symbols, equations, tables, and graphs.
